

“Pushing” Timez Attack to Multiple Computers

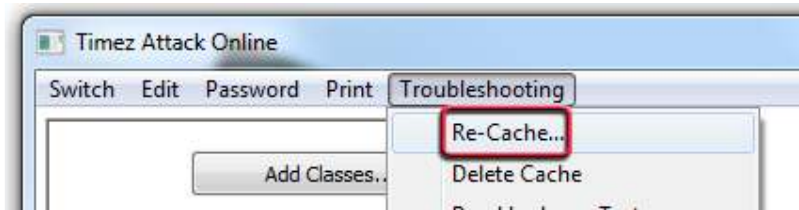

1. On a host machine, go to www.bigbrainz.com/Schools.php to download and run the Timez Attack installer for Mac or Windows:

2. After installation, let it launch Timez Attack and choose a “School” button :

3. Select your school and enter or set your password.
4. From the menu, select Troubleshooting/Re-Cache.

5. Push the .exe or .app and the cache folder(s) to remote stations:

WINDOWS	OS X
A screenshot of a Windows file explorer window showing the following structure: <ul style="list-style-type: none">Program Files (x86) (Vista/Windows 7)<ul style="list-style-type: none">TimezAttackLauncher<ul style="list-style-type: none">TimezAttackLauncher.exeProgramData<ul style="list-style-type: none">BigBrainz <p>In XP, the cache is C:\BigBrainz instead.</p>	A diagram showing the OS X file structure: <ul style="list-style-type: none">TimezAttackLauncher.app (Typically on desktop or in 'Applications')+/Library/Application Support/Big Brainz+/Library/Application Support/TimezAttack

6. Ensure all users have read/write permissions to the cache and all of its contents on the target computers.
7. Create shortcuts. Note that the .exe or .app is small enough to be used in place of a short-cut or alias if desired.
